Read-passage task

Why a recording-level split leaks

Protocol asks for the passage twice, so almost every participant contributes 2 correlated readings.

39 participants: 2 readings, 1 session
3 participants: 4 readings across 2 sessions
4 participants: 1 reading only

With 2 readings each, a 5-fold recording-level split places a participant's other reading in the training set for roughly 4 of every 5 held-out recordings.
